About me

I am a Computer Technology student specializing in backend and full-stack development, with experience in academic and personal projects using Java, Spring Boot, Node.js, React, and SQL and NoSQL databases. Currently, I develop web applications and APIs, participating in both individual and team projects where I have implemented backend functionalities, management systems, and full-stack solutions, applying software architecture principles and best development practices. I am motivated by continuous learning and problem-solving through technology.

Technical Stack

Languages: JavaScript, TypeScript, Python, Java, PHP, SQL, C/C++

Backend: Node.js, Express, Spring Boot, Laravel, REST APIs, GraphQL, WebSockets

Frontend: React, Next.js, Redux, MUI, Tailwind CSS

Databases: PostgreSQL, MariaDB, MongoDB, Elasticsearch

Cloud & DevOps: AWS (S3, EC2, Lambda, CloudFront, CloudWatch), Docker, Docker Compose (basic)

Tools: Git, Postman, Bruno, CLI, Jest, Supertest, Cypress

Concepts: POO, MVC, Software Architecture, Data Structures, Algorithms, Clean Code, SOLID Principles

Credentials and Experience

Backend Developer, ID For IDEAS	15/06/26 — 15/07/26
Network Technician, Instituto IBEC	08/05/26 — 21/08/26
Web Design Intro, Hack Academy	27/01/25 — 06/03/25
OOP with Python, ceibal	2024
Javascript Algorithms and Data Structures , freecodecamp	2025

Education

Computer Technologist (Computer Science)

Higher School of Informatics & FING, Buceo, Montevideo

2025 - Act.

High School Diploma in Computer Science

Higher School of Informatics, Buceo, Montevideo

2024 - Completed

Featured Projects

NovaVolt E-commerce - Electronics Retail Platform

Stack: TypeScript, React, TailwindCSS, Vite, Supabase, React Router, JavaScript

A modern e-commerce platform for electronics and accessories, developed as a responsive Single Page Application (SPA). I designed and implemented features including dynamic product catalog, advanced filtering, shopping cart, user

authentication, and reusable component architecture. The project involved Supabase integration for authentication and data management, route handling with React Router, and building a scalable frontend structure focused on performance and user experience.

Genius - Business Management Platform

Stack: Java 17, Spring Boot, REST APIs, Maven, JavaScript, Node.js, Express, React, Vite, Python, Swagger/OpenAPI, JUnit, Power BI, Excel

Participated in the development of Genius, a modular enterprise management platform composed of multiple applications, including budget management, CRM, landing administration, and analytics dashboards. Worked as a Backend Developer within a Scrum-based team, collaborating with frontend developers, backend developers, analysts, and project management roles.

I contributed to the design and implementation of frontend/backend services using Java and Spring Boot, developing REST APIs for business operations and data management. The project followed agile practices including sprint planning, daily meetings, task estimation using Planning Poker, backlog management, and iterative deliveries based on requirements. I also participated in API documentation with Swagger/OpenAPI, testing, reporting processes using Python, Excel and Power BI, and the final product demonstration.

Automotive Website (JavaScript + APIs, final project)

Stack: JavaScript, HTML, CSS, Fetch API, LocalStorage

Participated in the development of an interactive automotive website as part of a collaborative project carried out during the Web Development course at Hack Academy. The project involved a team of 8-10 members working together to implement vehicle visualization, filtering functionalities, API consumption, and client-side data management using LocalStorage.

The development process included collaborative coding sessions with instructor guidance, where the team shared screens, analyzed problems, discussed possible solutions, and received feedback on implementation approaches and development practices. This experience strengthened my JavaScript knowledge, teamwork skills, debugging abilities, and understanding of software development fundamentals, including details and best practices that can often be overlooked even with previous programming experience.
